**Augusta** has medium to high demands to soil and water supply. Good soil structure is advantageous.

**Augusta** is growing medium sized tubers. Due to medium tuberisation rate the recommended plant density is approx. 46,000 plants/ha. Attention should be paid on sufficient supply of potassium and magnesium.

**Augusta** has a good field resistance to late blight. However, regular protective chemical control of late blight is recommended.

**Augusta** is a high yielding floury cooking quality ware potato with nice shaped tubers and good storability.

All particulars are based on official variety trials and/or our own experience.  
However, as potatoes are natural products we cannot undertake any liability for these details.
