Concordia

**medium early premium quality
ware potato**

- nice oval tuber shape, smooth skin
- pure yellow flesh colour
- high marketable yield
- excellent suitable for pre-packing

Concordia

medium early, high yielding quality ware potato with excellent suitability for washing and packing

Maturity	medium early	Tuber tuber shape eye depth flesh colour skin raw discolouration	oval shallow to very shallow yellow yellow, smooth low
Cooking type (EAPR)	B		
Consumption quality	quality ware potato, very low discolouration after cooking, suitable for peeling and convenience products	Resistances PCN Potato Virus Y (PVY) leaf blight tuber blight Rhizoctonia common scab	Ro 1, Ro 4 high - very high medium high - medium high
Yield	high marketable yield, medium sized tubers, very uniform grading		
Youth development	rapid		
Dormancy	high, excellent suitable for storage	Sensitivities spraing bruising mechanical damage	low very low low - medium

Concordia has medium demands to the soil and water supply. Second growth will appear only under extreme environmental conditions. However, uniform water and nutrient supply is advantageous.

Concordia is growing very uniform medium sized tubers. Due to the medium tuberisation rate the recommended plant density should be approx. 46,000 plants/ha. Chemical control of *Rhizoctonia* is generally recommended.

Concordia sets a new standard regarding stability of tuber shape as well as suitability for washing and packing.

All particulars are based on official variety trials and/or our own experience.
However, as potatoes are natural products we cannot undertake any liability for these details.
