Ewelina

early, robust quality ware potato

- high marketable yield
- good drought tolerance
- low sensitivity to mechanical damage and bruising

Ewelina

early, robust quality ware potato

Maturity	early	Tuber tuber shape eye depth flesh colour skin raw discolouration	round-oval to oval shallow light yellow slightly netted low
Cooking type (EAPR)	B		
Consumption quality	quality ware potato, good taste, low discolouration after cooking		
Yield	high marketable yield, medium sized tubers, uniform grading	Resistances potato wart disease PCN leaf blight black leg common scab	D 1 Ro 1*) medium - high high medium - high
Youth development	rapid		
Dormancy	high, good storability	Sensitivities spraying bruising mechanical damage	medium - low very low low

*) resistance attested in one EU country

Ewelina has low to medium demands to soil and humidity. Due to the very good drought tolerance, high yields with good tuber quality will be achieved also at difficult environmental conditions.

Ewelina is growing medium sized to large sized tubers. The tuberisation rate is medium, the recommended plant density should be approx. 46,000 plants/ha.

Ewelina yields uniform tubers of good quality also under difficult environmental conditions, and is a generally easy to handle potato variety.

All particulars are based on official variety trials and/or our own experience.
However, as potatoes are natural products we cannot undertake any liability for these details.
