

**varieties, competence
& service**

Red Fantasy

**medium early, red skinned quality
ware potato**

- smooth red skin, nice tuber shape
- very good table quality
- good disease resistance
- very good adaptability to different environmental conditions

Red Fantasy

medium early red skinned quality ware potato

Maturity	medium early	Tuber tuber shape eye depth flesh colour skin raw discolouration	oval - long oval shallow deep yellow nice red, smooth low
Cooking type (EAPR)	B		
Consumption quality	quality ware potato, deep yellow flesh colour, excellent flavour, low discolouration after cooking	Resistances potato wart disease PCN Potato Leafroll Virus Potato Virus Y (PVY) foliage blight tuber blight black leg common scab	D1 Ro 1, Ro 4 high very high high high high high
Yield	high marketable yield, very nice medium to large sized uniform tubers		
Youth development	rapid		
Dormancy	high, very good storability	Sensitivities spraying bruising mechanical damage	low low low - medium

Red Fantasy has medium demands to the soil and water supply. Slightly reduced nitrogen fertilization (approx. 10% less than local standard) is recommended.

Red Fantasy is growing medium to large sized tubers. Due to the medium tuberisation rate the recommended plant density is approx. 46,000 plants/ha.

Red Fantasy is slightly sensitive to herbicide Metribuzine (Sencor, etc.). Post emergence application should be avoided. Routine protective control of late blight is recommended.

Red Fantasy is yielding nice red skinned tuber with very good culinary quality under very different environmental conditions.

All particulars are based on official variety trials and/or our own experience.
However, as potatoes are natural products we cannot undertake any liability for these details.
